## Communicating with Peers

### Practical Activity: Suspected abuse of a Child in the Emergency Department

- Problem addressed: we present the case of a child in the emergency department with suspected abuse
- Soft skill: rapid decision making, strategic thinking, courtesy, assertiveness, leadership
- Method: case-based learning

It is about exposing the case of a child evaluated in the emergency department by a cranial trauma in the context of a cardiopulmonary resuscitation according to what the parents refer but that in imaging tests there is evidence of several cranial fractures in addition to hemorrhages in different evolutionary stage. The aim goal is evaluating the management of the situation: how to coordinate with nursing the need to call the child care service, the guardian judge ... as well as the transmission to parents of the need to enter the child and the sister twin of her due to suspected non-accidental cranium-encephalic trauma.
