## Description of the organisation

A.S.L.To3 (you can visit our website [www.aslto3.piemonte.it](http://www.aslto3.piemonte.it)) is a Public Healthcare Authority and has been established in 2007 as a merger of four public healthcare authorities.

The healthcare professional workers are currently around 4500. The main hospitals of ASLTO3 are based in the cities of Pinerolo, Rivoli, Venaria and Susa.

The goal of A.S.L. TO3 is to guarantee adequate levels of healthcare to the population. Its mission is to improve the quality of care and the quality of life of citizens, with a special attention to:

- The importance of the "person" (in particular elderly people, terminally ill patient, patients with multiple pathologies, disabled people);
- The quality of service through the quality of the performance, the effectiveness and the appropriateness;
- The effectiveness of clinical care and pertinent data; security and risk management; therapeutic continuity.

## Experience of the organization in previous European projects

Partner of the project MOOC in Palliative Care (MedLang) coordinated by University of Pope (IASI; Romania) within the Erasmus + Programme, Sub Program KA Cooperation for innovation and the exchange of good practices, Action Strategic Partnership. The project started on 1st of September 2014 and will end on 31st of August 2017.

Partner of the project MAGIC coordinated by BSO (UK) within the Horizon2020 - PHC27 PCP. The project started on 1st January 2016.

Partner of the project Healthcare KA1 Mobility of students coordinated by Deputacion de Pontevedra (ES).

Partner of the Project ProMIS, Transnational Cooperation IT-FR Alcotra Program.

### **Experience and Expertise of the organization in the project's subject area**

The Structure of Research and Training is responsible to build events and projects in support of lifelong learning; in this contest, each task is planned, designed, programmed and evaluated on the basis of a periodic analysis of training needs. The structure owns an intranet platform in which all the structures of ASLTO3 present any training needs and proposal. Planning is executed in collaboration with the committee to implement the learning potential. Our organisation manages also the ECM system - the process by which the health professionals update their competences to respond to patients' needs, to the needs of the health care system and to their own professional development - and the platform for the Distance Training. The target of the training consists of all the professionals working in health areas. Our aim is to keep up with the advancement of medicine, research and technology to provide innovative and specialized training and to equip health professionals for the types of work needed now and in the future. The structure supports the availment of smart and social instruments in the training programs.

Our structure is linked with Piedmont Region for the implementation of European Projects.

### **Reasons of involvement in the project**

Paediatric Public Services at the moment are included in the concept of Paediatric area, which means a special approach to spaces, services and care of patients, with dedicated structures and modalities. This concept encompasses structures as children hospitals and children wards in general hospitals, where only paediatricians and specialized nurses are accepted. There is a children side in the family offices called consulatori, scattered in the territory of most ASL, a paediatrician who works in many public kindergardens, school doctors, and there are new emerging figures, called "Community Paediatricians". All these persons have to stay in contact with the main figure to care for all children, the Peditra di Famiglia ( Family Paediatrician). This figure is conceived as the paediatrician who follows all the aspects of the physical and psychical growth from birth to adolescence, He should know the whole history of the patient and his family, care for the needs of his patients in terms of regular organized visits and checks with the possibility of ordering specialistic visits and exams if needed, phone consultations, vaccinations. He is also in charge for certificates. He is supposed to be the trait d'union between the family and the second level structures.

The paediatric professionals are involved in a lot of activities with the children and relatives. For this reasons, it's very important to improve the soft skills in order to guarantee the maximum standard of quality of care.

### **Contact Person's Experience and Expertise**

#### **Sabrina Grigolo**

She is Health Coordinator. Degree in Pedagogy.
