## Practical Application 2.1 Communication during handoffs between nurses (SBAR)

### CASE VIDEO - DIALOGUE

#### *"The Handover Report ..."*

**NURSE:** Let's start talking about Andrea the patient sent by Doctor ---- for lymphadenopathy; he has already been treated with antibiotics and more, we made pharyngeal swabs, the classic 2, and sent the blood tests; We are waiting for the reports

**NURSE 2:** In bed n.3 we find Victoria, the baby with pancreatitis

**NURSE:** Is the girl better?

**NURSE 2:** Yes she's better but she still continues to complain about epigastria especially in the morning when she wakes up; Before you make the densimeter to zero she always has this pain, in my opinion it's partly due to the fact that she is fasting for 4-5 days

**NURSE 2:** So..she did the checks this morning, amylase is still increasing therefore she need to continue the fast

**NURSE 3:** Water and broth?

**NURSE:** Yes she can take the vegetable broth we made with our sachets, the one we have here, as usual, those of the infants

**NURSE 3:** She can't even eat yogurt then?

**NURSE 2:** No absolutely no yogurt. I asked for a possible check because, as I wrote to you, they had to let us know, I just asked them and they told me that tomorrow she will skip the medical checks and she will do them on Sunday morning

**NURSE:** All right, the next is bed 10

**NURSE 2:** At bed 10 there is a little boy who arrived tonight with a pain in the right fossil; the pain arose first as per-umbilical pain and then located at the level of the right fossil; the exams are slightly altered, the surgeon visited him and considers an intervention to be necessary. We made the echo and then checked again the coagulation because the NR was a little rough

**NURSE 4:** Poor baby!

**NURSE 2:** In fact because we removed and repositioned the cannula

**NURSE 3:** Does he already have everything needed for the operating room?

**NURSE 2:** He already has everything needed for the operating room, he also did the ECG he didn't have; here in the folder you will find the fax authorization, the father's delegation authorizing the intervention, the photocopy of both the identity card and the tax code is also attached; It seems to me that they still have to make him sign the consents for...

**NURSE 3:** Does the surgeon know that there is consent?

**NURSE 2:** Yes, it seems to me that they still have to let him sign the consent for the surgery
